Markdown Studio — Math And Local Assets Example

This example is a small, redistributable version of cases that started in the local Markdown corpus. It focuses on two workflows that often break in Preview/PDF tools: KaTeX math and local relative assets.

KaTeX Math

Inline math should render inside normal prose: $E = mc^2$ and $\alpha + \beta = \gamma$.

Currency should remain ordinary text: The total is \$12.50 and should not become math.

Display math:

$$\int_0^1 x^2 dx = \frac{1}{3}$$
$$a^2 + b^2 = c^2$$
$$\sum_{i=1}^n i = \frac{n(n+1)}{2}$$

Math In Tables And Lists

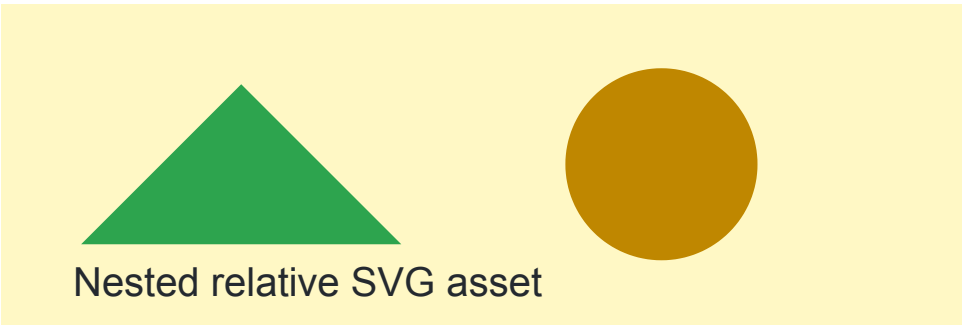

Name	Formula	Notes
Area	$A = \pi r^2$	Inline math in a table cell
Normal distribution	$N(\mu, \sigma^2)$	Greek letters and parentheses

- Inline list math: $f(x) = x^2 + 1$.
- Longer inline math: $\sum_{i=1}^n i = \frac{n(n+1)}{2}$.

Local Relative Images

Images with relative paths should resolve in Preview and PDF.

![Logo with spaces](images/local asset sample.svg)

Inline HTML images should resolve too:

Space Path

Local Links

Missing Local Asset

A missing local image should not crash Preview or PDF export:

Missing image
