Markdown Studio - Windows Compatibility Demo

Open this file on Windows and run **Markdown Studio: Preview** from the command palette.

This demo is based on `examples/demo.md` , but focuses on items that often expose Windows-specific bugs:

- CRLF line endings and TOC auto-update
- Windows paths with backslashes, spaces, drive letters, and file URIs
- Mermaid, PlantUML, and inline SVG fenced blocks
- PowerShell, cmd/batch, JSON, and INI syntax highlighting
- Local image resolution for preview and PDF export

For the strongest check, save this file with **CRLF** line endings before previewing and exporting.

1. Windows Path Samples

These strings are intentionally Windows-shaped. They should render as plain text unless they are explicitly inside a Markdown link or image.

Case	Sample
Drive path	<code>C:\Users\Public\Documents\Markdown Studio\demo_win.md</code>
Program Files	<code>C:\Program Files\Markdown Studio\bin\markdown-studio.exe</code>
OneDrive path	<code>C:\Users\demo\OneDrive - Example Corp\Docs\report.md</code>
UNC path	<code>\\fileserv\teams\docs\weekly-report.md</code>
Temp path	<code>%TEMP%\markdown-studio\diagram-output.svg</code>
File URI	<code>file:///C:/Users/Public/Documents/Markdown%20Studio/logo.svg</code>

Visible file URI link target:

`file:///C:/Users/Public/Documents/Markdown%20Studio/demo_win.md`

Plain URL-like text should not damage surrounding content:

`file:///C:/Users/Public/Documents/Markdown%20Studio/diagram.svg`

2. Local Images and File URIs

Relative SVG from this repository:

Markdown Studio Local-First

Parent-relative icon:

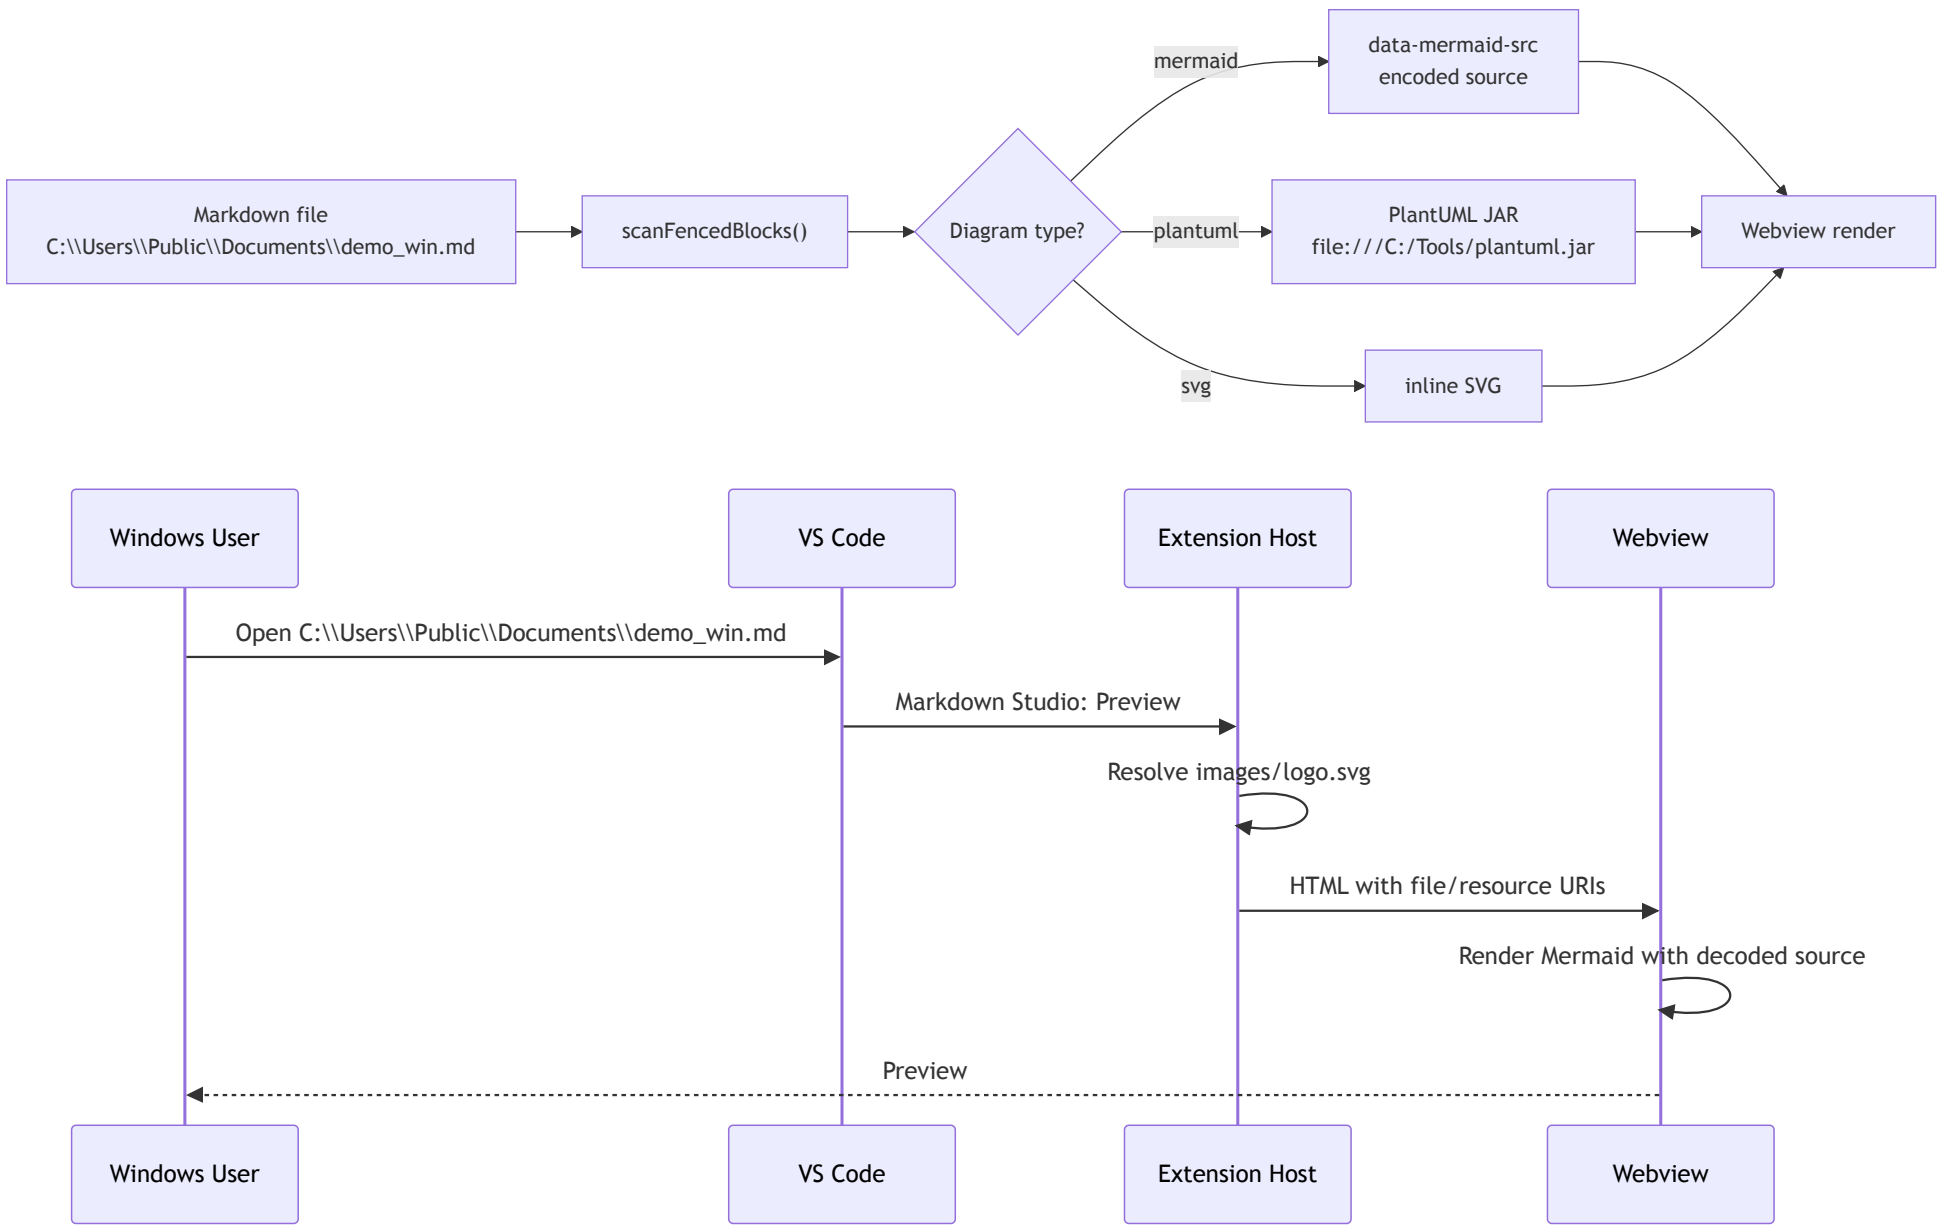

Windows-style image paths below are expected to be environment-dependent. They are included as literal path samples, not as guaranteed local images.

```
1 Windows file URI: file:///C:/Users/Public/Pictures/Markdown%20Studio/logo.svg
2 Windows drive path: C:\Users\Public\Pictures\Markdown Studio\logo.svg
3 UNC path: \\fileserver\shared\images\logo.svg
4 UNC file URI: file://fileserver/shared/images/logo.svg
```

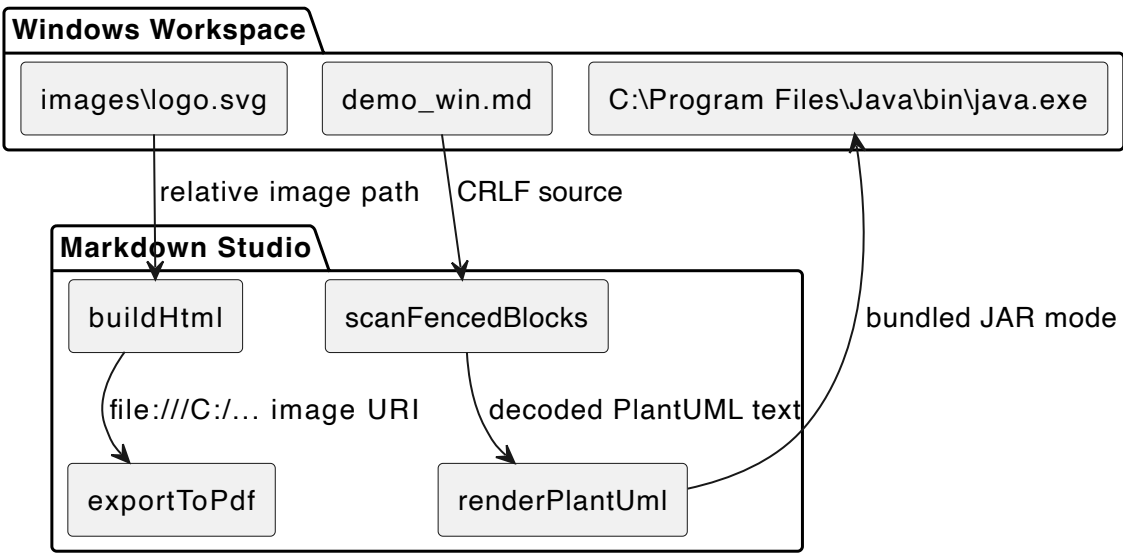

3. Mermaid Diagrams

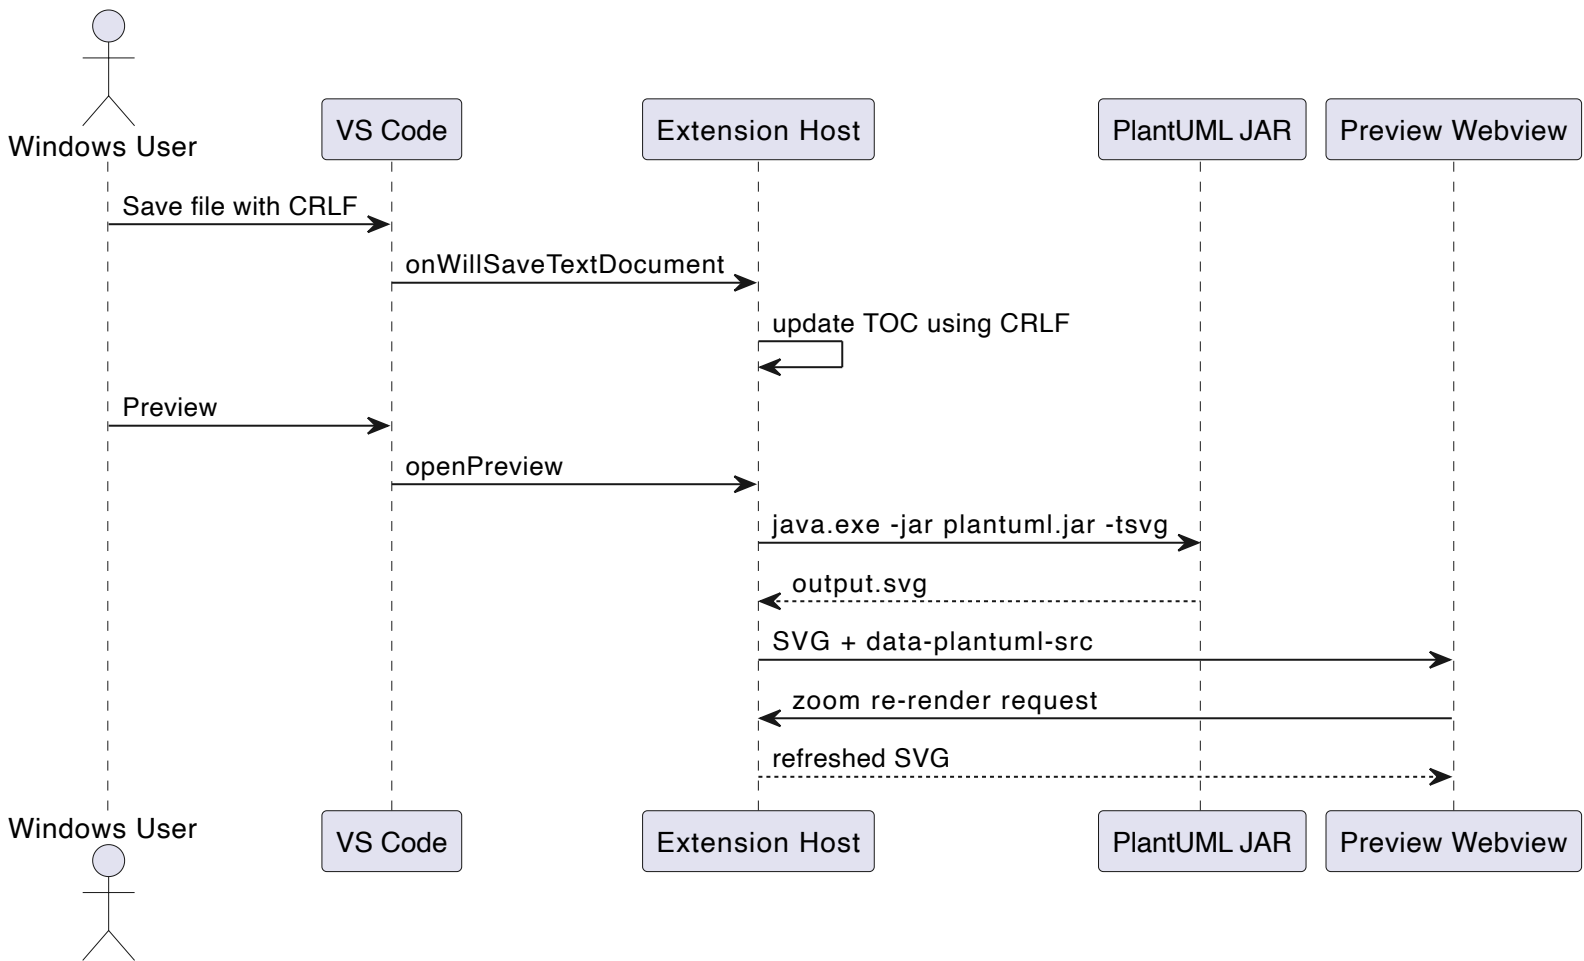

Mermaid source contains Windows paths, backslashes, spaces, and percent-encoded file URI text.

4. PlantUML Diagrams

PlantUML source includes Windows paths and a file URI. Zooming the diagram should keep re-render working.

5. Inline SVG

Inline SVG should be replaced as a diagram container even when the document uses CRLF line endings.

file:///C:/Users/Public/Documents/Markdown%20Studio/demo_win.md

6. Windows Shell Highlighting

PowerShell:

```
1 $workspace = "C:\Users\Public\Documents\Markdown Studio"
2 $markdown = Join-Path $workspace "demo_win.md"
3 $java = "C:\Program Files\Amazon Corretto\jdk21\bin\java.exe"
4
5 Write-Host "Previewing $markdown"
6 & $java -version
```

cmd / batch:

```
1 @echo off
2 set WORKSPACE=C:\Users\Public\Documents\Markdown Studio
3 set DEMO=%WORKSPACE%\demo_win.md
4 echo Exporting "%DEMO%"
5 if exist "%DEMO%" (
6     echo File exists
7 ) else (
8     echo Missing demo file
9 )
```

JSON settings:

```
1  {
2    "markdownStudio.java.path": "C:\\Program Files\\Amazon Corretto\\jdk21\\bin\\java.exe",
3    "markdownStudio.plantuml.mode": "bundled-jar",
4    "markdownStudio.export.pageFormat": "A4",
5    "markdownStudio.security.externalResources.mode": "whitelist",
6    "markdownStudio.security.externalResources.allowedDomains": [
7      "github.com",
8      "raw.githubusercontent.com"
9    ]
10 }
```

INI-style path data:

```
1  [workspace]
2  root=C:\\Users\\Public\\Documents\\Markdown Studio
3  markdown=demo_win.md
4  image=images\\logo.svg
5  pdf=C:\\Users\\Public\\Documents\\Markdown Studio\\demo_win.pdf
```

7. Tables, Lists, and Anchors

This section checks heading anchors, TOC generation, Japanese text, and path-heavy table cells.

日本語とWindowsパス

- 日本語見出し with path: C:\\Users\\Public\\ドキュメント\\demo_win.md
- Spaces in path: C:\\Users\\Public\\My Documents\\Markdown Studio\\demo win.md
- Percent encoding: Markdown%20Studio

Item	Expected behavior
C:\\Temp\\a\\b\\c.txt	Stays readable as inline code
\\server\\share\\file.md	Stays readable as inline code
file:///C:/Temp/demo.svg	Stays readable as file URI text
images/logo.svg	Resolves as a relative local image when used in img

Task List

- ☒ Preview renders this file
- ☒ Mermaid renders
- ☒ PlantUML renders
- ☒ Inline SVG renders
- ☐ Export PDF and inspect local images
- ☐ Save with CRLF and confirm the TOC remains CRLF after save

8. PDF Export Checklist

When exporting this file on Windows, check:

- The relative SVG logo appears in the PDF.
- Mermaid diagrams render before PDF generation finishes.
- PlantUML diagrams render and keep text labels.
- Inline SVG appears as a diagram, not as a code block.
- Paths containing spaces do not break image processing.
- The TOC does not rewrite the whole document from CRLF to LF.
