Markdown Studio — Feature Demo

Open this file and run **Markdown Studio: Open Secure Preview** (`Cmd+Shift+P`).

---

1. Markdown Rendering

Bold, *italic*, ~~strikethrough~~, `inline code`

> Blockquotes work too.

Feature	Status
Markdown	✅
Mermaid	✅
PlantUML	✅
SVG	✅
PDF Export	✅

1. Ordered list item
2. Another item
3. Third item

- Unordered item
- Another item

- Item

---

2. Mermaid Diagrams

Markdown Studio Architecture

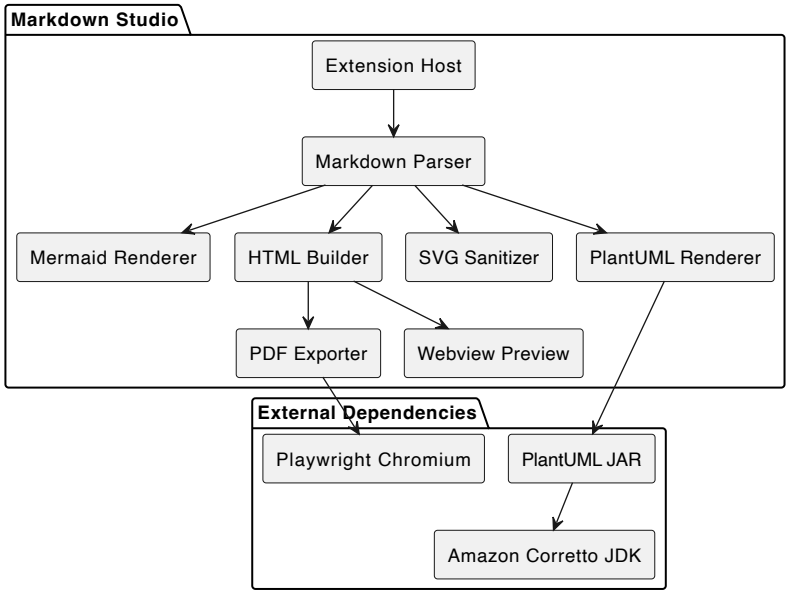
Extension Activation Flow

---

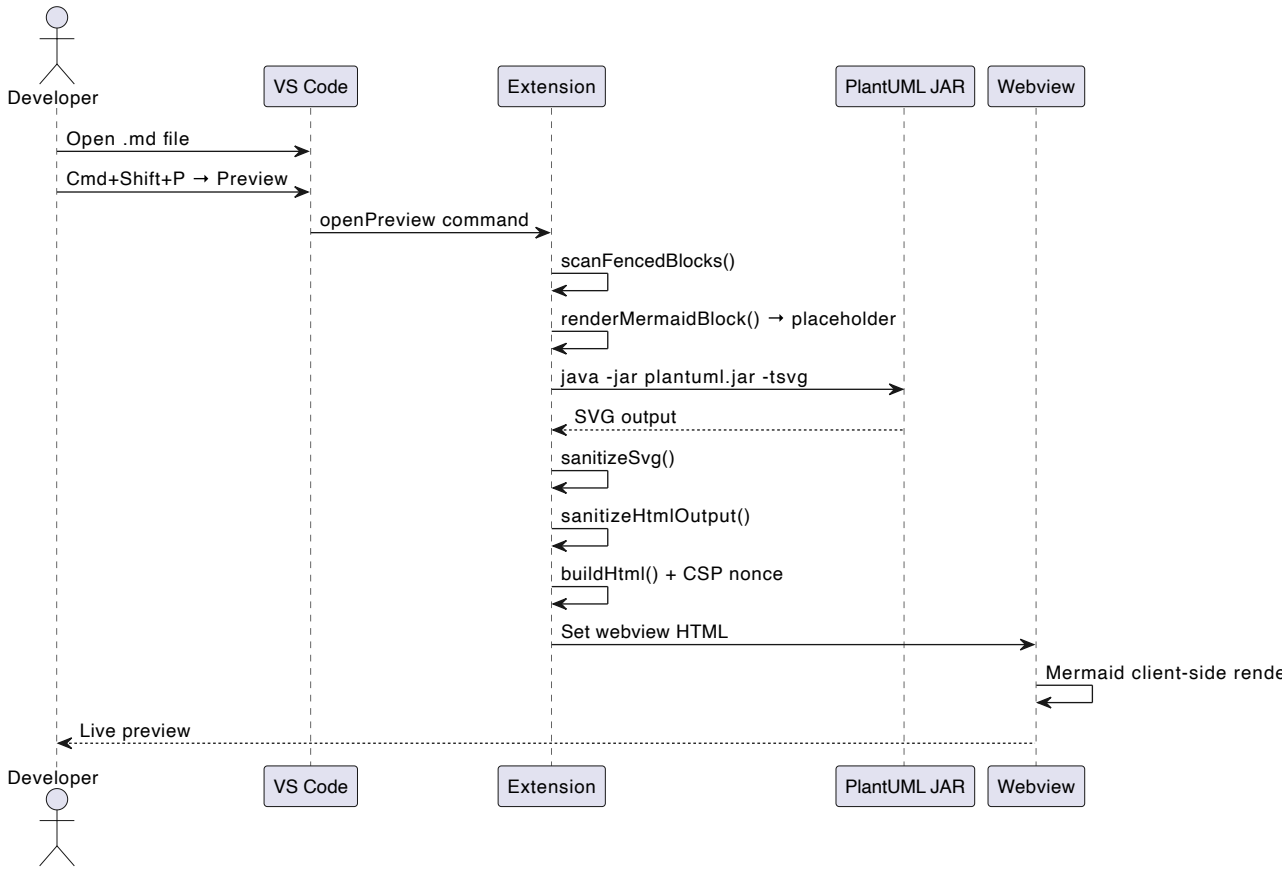
3. PlantUML Diagrams

Rendered locally via bundled JAR. No remote server.

Extension Component Diagram



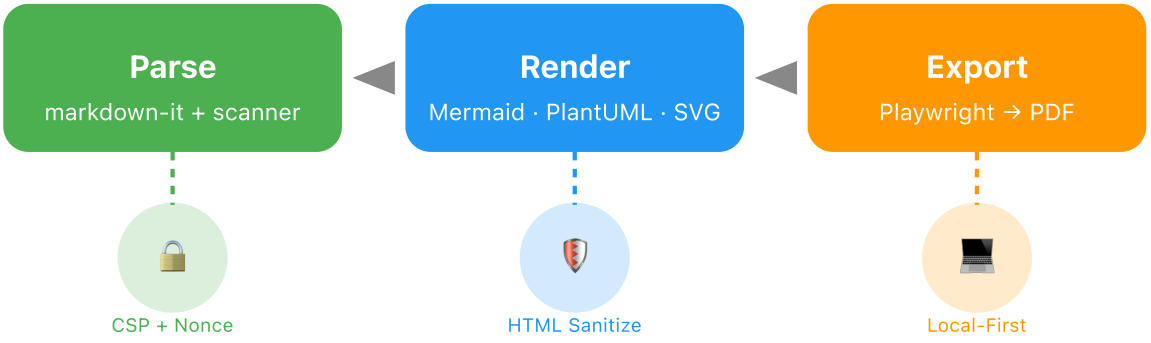
Document Processing Sequence



---

4. Inline SVG (Sanitized)

Dangerous elements (`<script>`, `<foreignObject>`, event handlers) are stripped automatically.



---

5. Syntax Highlighting

```
import * as vscode from 'vscode';

export function activate(context: vscode.ExtensionContext): void {
  const depManager = new DependencyManager();
  const status = await depManager.ensureAll(context);

  context.subscriptions.push(
    vscode.commands.registerCommand('markdownStudio.openPreview', async () => {
      await openPreviewCommand(context);
    }),
```

```
    vscode.commands.registerCommand('markdownStudio.exportPdf', async () => {
      await exportPdfCommand(context);
    })
  );
}
```

```
{
  "markdownStudio.plantuml.mode": "bundled-jar",
  "markdownStudio.java.path": "java",
  "markdownStudio.export.pageFormat": "A4",
  "markdownStudio.security.blockExternalLinks": true
}
```

```
# PlantUML rendering is also useful for Python projects
from dataclasses import dataclass

@dataclass
class DiagramConfig:
    mode: str = "bundled-jar"
    java_path: str = "java"
    timeout_ms: int = 15000
```

---

6. Security Model

- ✅ No external API calls
- ✅ No SaaS dependency or CDN assets
- ✅ Restrictive CSP with random nonce
- ✅ HTML sanitization before rendering
- ✅ SVG sanitization strips scripts, event handlers, foreign objects
- ✅ External links and images blocked by default

External image (blocked by policy)

External image blocked by policy.

The image above is replaced with a policy notice in the preview.

External link (blocked by policy)

External link — blocked by default ✋

---

7. Theme Adaptability

Switch between **light** and **dark** mode in VS Code (`Cmd+K Cmd+T`) to see how the preview adapts:

- Mermaid diagrams automatically switch between light and dark themes
- SVG elements use colors chosen for visibility in both themes
- Code blocks use theme-aware syntax highlighting
- PlantUML output receives CSS overrides for dark mode

---

8. Diagram Type Catalog

All diagram types below are verified to render correctly with the bundled PlantUML + Smetana engine (no Graphviz required).

▶ Class Diagram
▶ Activity Diagram
▶ State Diagram
▶ Use Case Diagram
▶ Timing Diagram
▶ Mind Map
▶ Gantt Chart
▶ Object Diagram
▶ Mermaid: Pie Chart
▶ Mermaid: Git Graph

▶ SVG: Basic Shapes
▶ SVG: Lines and Paths
▶ SVG: Text and Styling
▶ SVG: Dashboard Layout

---

9. PDF Export

This entire document can be exported to PDF:

1. Open this file in VS Code
2. `Cmd+Shift+P` → **Markdown Studio: Export PDF**
3. A `demo.pdf` will be generated next to this file

The PDF uses the same HTML pipeline as the preview.

Markdown Studio v0.2.0
